## ABSTRACT

This report addresses the success of students as they progress through reading, English, and mathematics course sequences at Miami-Dade Community College (M-DCC) (Florida). Results suggest that passing prerequisite courses does not ensure that students are adequately prepared for the next course in the sequence, especially in the lower-level college preparatory courses, or when earning 'C' grades in college-level courses. Pass rates in reading courses ranging from 58% to 64%, for students who successfully completed the prerequisite course the previous term, suggest that students were reasonably well prepared. However, mathematics course pass rates indicate that students were not prepared by simply passing the prerequisite course. For college-level English and mathematics courses, students who earned higher grades in the prerequisite courses were better prepared for the next course than students who passed with 'C' grades. Results also varied by course within subject areas, with some courses in a sequence appearing to be more difficult for students than others, even after successfully completing the prescribed prerequisite course. In most cases, students placed directly into courses by test scores were more successful than students who progressed through college preparatory or prerequisite courses. (JA)

TO THE EDUCATIONAL RESOURCES INFORMATION CENTER (ERIC)."

**Method**

*This information capsule reports on the success of students as they progress through reading, English, and mathematics course sequences at M-DCC. Results suggest that passing prerequisite courses does not ensure that students are adequately prepared for the next course in the sequence especially in the lower level college preparatory courses or when earning 'C' grades in college-level courses. Prerequisites seemed to prepare students reasonably well in the English courses, and least well in the mathematics courses. Results also varied by course within subject areas, with some courses in a sequence appearing to be more difficult for students than others, even after successfully completing the prescribed prerequisite course. In most cases, students placed directly into courses by test scores were more successful than students who progressed through college preparatory or prerequisite courses.*

This information capsule reports on the success of students as they progress through reading, English, and mathematics course sequences at M-DCC. As part of the annual Placement Criteria Document review process, the test score ranges used to place students into courses are evaluated and modified as needed to ensure that students are prepared for the courses into which they are placed. This capsule provides information on the success of students as they progress to the next course and compares them to students who placed directly into the courses. Three questions are addressed in this capsule: 1) Does successful completion of a given course ensure that students are prepared for the next course in the sequence? 2) For college-level courses, does preparation level vary depending on grade received in the first course (e.g. are students who earn A's better prepared than students who earn C's for the next course)? 3) How do success rates for students who have successfully completed prerequisite courses compare to students who were placed directly into courses by test scores?

Student enrollment in reading, English, and mathematics courses during Fall Term 1998-1 and 1999-1 was captured. Students who successfully completed a course and enrolled in the next course in the sequence the following Spring Term 1998-2 and 1999-2, respectively, were included in the analysis. Only students enrolling immediately in the next course were included to maximize the preparation effects of the previous course. It seems reasonable to assume that students will have the best chance of success, and benefit the most from skills they mastered in the first course, if they enroll immediately in the next course. Restricting the analysis in this way also minimized the effects of extraneous factors on student performance (e.g. work demands, family responsibilities, etc.) since these could be expected to be relatively constant over this short period of time. The percent of students enrolling immediately is reported to indicate how likely students are to continue in the course sequence without delay.

## **Reading Results**

To answer the second question, whether preparation level varied by grade, student grades were captured for the first course and success in the second course reported for each grading category. The campus reported in these tables is the campus where the student took the prerequisite (fall term) course. The third question was addressed by reporting success rates for first-time-in-college students who were placed directly into the same courses by their test scores.

Success in reading courses is reported in Tables 1 and 2 for each campus and college-wide. Results show that 58% of students college-wide who earned an 'S' in REA 0001 in 1998-1 were successful in REA 0002 in 1998-2. This rate increased to 61% in 1999-2. Results varied by campus and also, to some extent, between the two years presented for each campus. Kendall Campus had the highest success rate in 1999-2 for REA 0002 (79%), which represents a dramatic increase from the previous year when the rate was 59%. Perhaps changes were made in the instructional format or curriculum of REA 0001 or REA 0002 courses for 1999 that can account for this improvement. Tables 1a and 2a show comparison results for students placed directly into the reading courses by test scores. For both years, students were more likely to be successful in REA 0002 if placed directly by test scores (65% in 1998-1 and 68% in 1999-1) college-wide.

## **English Results**

For **REA 0010**, the success rate for students who had passed REA 0002 the previous term was 64% in 1998-2 and 62% in 1999-2. Results varied by campus with InterAmerican having the highest success rate for both years. InterAmerican also had the highest percent of students enrolling in the next course in the sequence the following term for both classes and both years, suggesting that students are strongly encouraged to continue immediately with the next course in the sequence to maximize their chances of success. Comparison results indicate that students who needed and successfully completed REA 0002 first had success rates comparable to students who placed directly into REA 0010 college-wide.

Tables 3 and 4 present success rates for English courses for 1998 and 1999 respectively while Tables 3a and 4a present comparison results for students who placed directly into the English courses. For ENC 0020, students who passed **ENC 0002** in the fall term had success rates of 60% in 1998-2 and 67% in 1999-2. Most campuses had an increase in success rates in ENC 0020 in 1999. North Campus had the largest increase (10 percentage points) but still had the lowest success rate for ENC 0020 of the six campuses for both years. College-wide, students who placed directly into ENC 0020 had the same success rate (67%) as students progressing through ENC 0002 in 1999 and slightly higher success rates in 1998 (63% vs. 60%).

College-wide results for **ENC 0021** indicate that students who successfully completed ENC 0020 the previous term had success rates of 59% in 1998-2 and 60% in 1999-2. North Campus had a remarkable increase in success rate for ENC 0021 in 1999 (16 percentage points) while rates on the other major campuses remained more stable. College-wide, students who placed directly into ENC 0021 were more likely to be successful than students completing ENC 0020 (64% for both years).

For **ENC 1101**, the college-wide success rate was 67% in 1998-2 and 66% in 1999-2 for students who had passed ENC 0021 the previous fall term. Success rates for the major campuses held fairly steady across the two years. While Homestead Campus had a large increase in success rate in 1999-2, this may be attributable to normal fluctuations due to small sample size. College-wide, students who placed directly into ENC 1101 were slightly more successful (69% for both years). In addition, students who placed directly into ENC 1101 were more likely to earn 'A' or 'B' grades (47% in 1998 and 46% in

1999) than students who completed ENC 0021 first (35% for both years). These results suggest that students beginning in college preparatory courses are less likely to achieve the 2.5 GPA required for the CLAST alternative.

The total college-wide success rate for **ENC 1102** was 69% in 1998-2 and 71% in 1999-2 for students who passed ENC 1101 the previous term. Students were far more likely to be successful in ENC 1102 if they earned an 'A' in ENC 1101 (86% for 1998-2 and 85% for 1999-2) than if they earned a 'B' or a 'C'. Students who earned 'A' grades in ENC 1101 were also most likely to earn 'A' grades in ENC 1102 (42% and 47% for 1998-2 and 1999-2 respectively). The success rate was a little bit lower for student earning 'B' grades in ENC 1101 (73% in 1998-2 and 76% in 1999-2). Again, students earning 'B' grades were most likely to earn another 'B' in ENC 1102. Students earning 'C' grades in ENC 1101 had the most difficulty in ENC 1102, with only 55% successful in 1998-2 and 58% in 1999-2. Those that were successful in ENC 1102 were most likely to earn another 'C' grade (26% in 1998-2 and 32% in 1999-2). This finding has implications for the CLAST alternative, as students earning 'C' grades in both ENC 1101 and 1102 are not eligible for the alternative. Campus results are left for the reader to examine.

For **ENC 2301**, the total college-wide success rate was 73% in 1998-2 and 69% in 1999-2 for students who passed ENC 1102 the previous term. As expected, students earning 'A' grades in ENC 1102 were more likely to be successful in ENC 2301 than students earning 'B' or 'C' grades. This was most noticeable in 1999-2. Again, students who earned 'C' grades in ENC 1102 were most likely to earn another 'C' in ENC 2301 with similar results for the 'A' and 'B' grades.

### **Mathematics Results**

Tables 5 and 6 display results for mathematics courses. College-wide, only about 1 in 3 students who enrolled in **MAT 0024** after passing MAT 0002 (previously MAT 0003) were successful in both years reported here. The success rate varied by campus, with Wolfson having the highest success rates of the major campuses for both years (40% in 1998-2 and 43% in 1999-2), and North Campus having the lowest (25% in 1998-2 and 19% in 1999-2). Comparison results for students placed directly into MAT 0024 are presented in Tables 5a and 6a. Students were much more likely to be successful in MAT 0024 if placed directly by test scores (57% in 1998 and 62% in 1999).

Students can take MAT 0020 (previously MAT 0012) or MAT 0024 before enrolling in **MAT 1033** depending on initial placement test scores. For students taking MAT 0020, the success rate in MAT 1033 was 43% college-wide for both years. For students taking MAT 0024 first, the success rate was 48% college-wide. These rates varied by campus, but Wolfson Campus had the highest success rates of the three major campuses for MAT 1033 in 1999-2 regardless of which course students took first. The pass rate in MAT 1033 for North Campus students in 1999-2 was much higher for students completing MAT 0024 (49%) than MAT 0020 (37%). Comparison results indicate that students placed directly into MAT 1033 were more likely to be successful, although only slightly more than half the students were successful (58% in 1998 and 56% in 1999) college-wide.

**MAC 1102** was re-numbered to MAC 1105 in 1999-1. MAC 1105 will be used to refer to this course in the narrative. Approximately half of the students taking **MAC 1105** immediately after passing MAT 1033 were successful, with 54% passing in 1998-2 and 51% passing in 1999-2 college-wide. Students were much more likely to be successful in MAC 1105 after earning an 'A' in MAT 1033 (81% passing in 1999-2), than students who earned a 'B' (55% passing in 1999-2). Less than a third of the students who earned a 'C' in MAT 1033 passed MAC 1105 in both of the years reported. Students placing directly

into MAC 1105 by test scores were slightly less likely to be successful (51% in 1998 and 49% in 1999). Campus results are left for the reader to examine.

For **MAC 1140**, students passing MAC 1105 the previous term had success rates of 54% in 1998-2 and 61% in 1999-2. Again, students who earned 'A' grades in MAC 1105 were most likely to be successful (80% in 1998-1 and 81% in 1999-2). Only 28% of the students earning 'C' grades in MAC 1105 in 1998 were successful in MAC 1140 the following term. This rate increased to 39% in 1999 but still only slightly more than a third of the students passing MAC 1105 with a 'C' were successful in MAC 1140. Of the students who were successful, most earned 'C' grades in MAC 1140, which would not qualify them for a CLAST alternative. Clearly students earning 'C' grades in MAC 1105 are likely to have difficulty in the next math course, and are unlikely to qualify for the CLAST alternative. An insufficient number of students were placed directly into MAC 1140 for comparison.

### **Conclusion**

The first question addressed whether passing a given course ensured that students were prepared for the next course in the sequence. Pass rates in reading courses ranging from 58% to 64%, for students who successfully completed the prerequisite course the previous term, suggest that students were reasonably well prepared, however, there seems to be room for improvement. English course pass rates were a little better – ranging from 59% for ENC 0021 to 73% for ENC 2301, both in 1998-2. Mathematics course pass rates indicate that students were not well prepared by simply passing the prerequisite course. Pass rates for mathematics courses ranged from 32% for MAT 0024 in 1998-2 to 61% for MAC 1140 in 1999-2. The transition between all math courses appears to be very difficult for many students.

The next question addressed whether students who earned higher grades in the prerequisite courses were better prepared for the next course than students who passed with 'C' grades. For college-level English and mathematics courses this appears to be true. Students earning 'C' grades in ENC 1101 were less likely to pass ENC 1102 (58% passed in 1999-2) than students who earned 'A' or 'B' grades (85% and 76% respectively). For mathematics, the difference was more pronounced -- students who earned 'C' grades in MAT 1033 were much less likely to pass MAC 1105 (31% in 1999-2) than students who earned 'A' or 'B' grades (81% and 55% respectively in 1999-2), and students who earned 'C' grades in MAC 1105 were much less likely to be successful or earn higher than a 'C' grade in MAC 1140. These results have important implications for students' ability to qualify for CLAST alternatives.

And finally, the last question addressed whether students placed directly by test scores were more likely to be successful than students who needed and completed required college preparatory or prerequisite courses. Results indicate that for most courses, success rates for students placed directly into the courses were higher. This was particularly true for MAT 0024 and MAT 1033.

Campus results indicate that success rates vary by campus, and for a given campus across the years studied. Comparisons with Homestead and InterAmerican should be made cautiously since the numbers are small for these campuses.
